Login or Register Button not Working
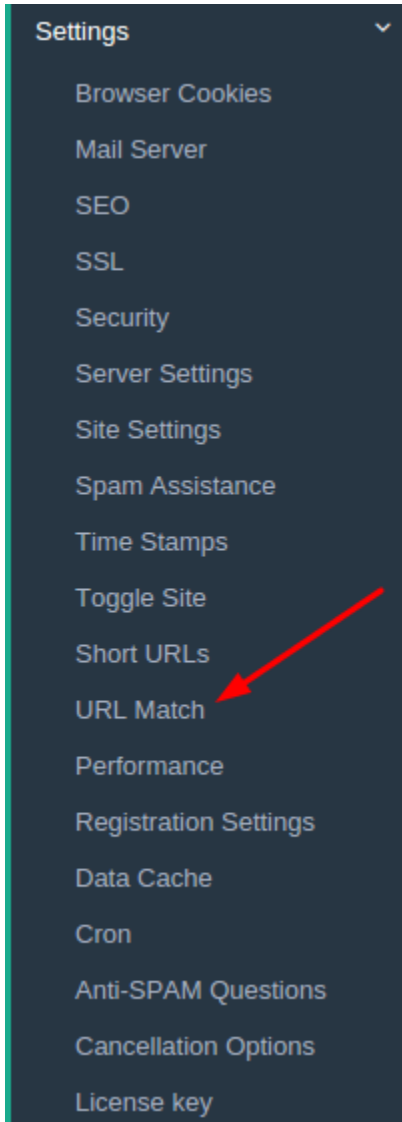

If you find that your Register or Login buttons won't open a popup after selecting, and you have your site set with www in the domain, this tutorial should help.

- Click Settings and choose URL Match.
- Click Enable and then Clear Cache.

Settings » URL Match

URL Match

If you enable this feature it will redirect a URL if the hostname does not match your active hostname.

Enable ←

Another solution is posted in this tutorial for log in issues.

If the above doesn't help, here are a few threads from our community:
