

# view

## Description

---

mixed **view**(string `$html_file` [, array `$parameters`])

---

Returns an parsed version of an HTML file that is loaded from your apps `/views` folder. Commonly used as a return method in routes.

## Parameters

---

`$html_file`

HTML file name.

`$parameters` (optional)

An array of parameters to pass to the template.

## Examples

---

```
route('/foo', function() {  
  
    // Loads HTML file from your apps /views folder  
    return view('index.html', [  
        'foo' => 'bar'  
    ]);  
});
```

In this example our HTML `index.html` could look like

```
<h1>Hello World!</h1>  
<p>  
    {{ foo }}  
</p>
```
