

Installing/Uninstalling Apps

Third party apps are not part of the phpFox script and they are provided and maintained by the developer parties that list them.

phpFox is not responsible for any issues that third-party apps could cause to your website. It is always good to fully backup your site before installing anything new to your site. In addition, you should always need to look through the reviews or research the apps, as well as developers providing the apps, before making any decision to purchase or install them.

This tutorial will show you how to install/uninstall third-party Apps for your phpFox site. This assumes you are already logged in as the Admin user and are logged into the AdminCP.

Installing Apps

Go to **AdminCP >> Apps >> Find More**.

Click on the button **FIND MORE** to get more apps from the phpFox store to show up in the bottom list. Use the **Search Box** to find an app.

Once you find an app you want to see more info about, select it. The app's info screen and install/order screen will show. You'll be able to purchase apps directly from this screen.

Once the purchase is done and Paypal has transferred the funds from your account to the third party developer's account, you'll be able to click to install the app.

For freebies, just click **Install** to install it.

1. Click **Install** to install free apps or to pay for and then install paid apps. The image below shows a free app. Paid apps would show the price.
2. You can review the app right from **Admin CP**.
3. You can read more info about the app, including any special tips from the developers.

The screenshot shows the phpFox Admin CP interface. On the left is a sidebar with navigation links: Dashboard, Apps, Installed, Purchase History, Find More, Globalization, Appearance, Members, Settings, Maintenance, and Logout. The main content area displays the 'Subscriptions' app by phpFox. At the top, there's a search bar. Below it, the app title 'Subscriptions' is shown with a small icon. A note states 'This product can only be installed by Pro License ID'. A large blue 'Install' button is prominently displayed and highlighted with a red box. To the right of the button, the app is marked as 'Free'. Below the button, there's a rating section showing 5 stars and a 'Submit your review' button. At the bottom right, a table lists the app's version as 4.6.0 and the last updated date as July 27, 2018.

Purchase App in Store

In case you haven't purchase the app, instead of Install button, it will be Buy Now button

This screenshot shows the 'Advanced Like' app page in the phpFox Admin CP. The app is by FoxExpert and is categorized under 'Apps / User Interactions'. The price is displayed as \$29, which is a 26% discount from the original price of \$39. A large blue 'Buy Now' button is highlighted with a red box. The app's rating is shown as 4.9 stars based on 15 reviews. Below the main app information, there are two preview images showing the app's interface on a mobile device. At the bottom left, there's a section for 'Compatible with 4.6 and with 4.5' and a description of the app's features. On the right side, a table provides additional details: Version 4.61, Last updated August 3, 2018, For phpFox 4.0.0 and above, Installs 76, Terms of Service (View), and Live demo (View).

You can click on the button to buy and there will be a prompting for payment.

- Once you've installed the app, you need to [rebuild core theme](#) and [clear cache](#) to make sure the app work well.

Note

1. If you purchased directly at the store, you would need to do the step above that shows how to Get It. It is best to purchase Apps/Themes /Languages directly from Admin CP instead of at the store as many servers don't allow the connection back when done from the store.
2. For recent app installer, you might not need to do steps after selecting **Install** as they will automatically decide the best practice and install the app for you.

Uninstall Apps

Go to an **Apps >> Installed**, Click the setting icon of the app you want to uninstall then select uninstall.
