

setting

Description

mixed **setting**(string [\\$setting_name](#))

Returns a value of a setting defined in an Apps **Install.php** file. These settings can then be edited by site Admins from their AdminCP.

Parameters

[\\$setting_name](#)

Name of the setting to return.

Examples

```
// Prints the value of the setting foo
echo setting('foo');

// Setting used in an IF statement if it holds boolean values
if (setting('foo')) {

}

// Used in HTML templates
{{ setting('foo') }}
```
