

# permalink

## Description

---

mixed **permalink**(string *\$route*, int *\$id*, string *\$title*)

---

Creates a unique permalink. This is handy when you want to create an App that requires viewing an item, like a blog or video. This function follows our default permalink rules and structure.

## Parameters

---

*\$route*

URL path for your link.

*\$id*

Unique ID number.

*\$title*

Title of the item

## Examples

---

```
echo permalink('/foo', 1, 'Hello World!');  
  
// Will create a link (e.g. http://localhost/foo/1/hello-world/)
```
