

permalink

Description

mixed **permalink**(string *\$route*, int *\$id*, string *\$title*)

Creates a unique permalink. This is handy when you want to create an App that requires viewing an item, like a blog or video. This function follows our default permalink rules and structure.

Parameters

\$route

URL path for your link.

\$id

Unique ID number.

\$title

Title of the item

Examples

```
echo permalink('/foo', 1, 'Hello World!');  
  
// Will create a link (e.g. http://localhost/foo/1/hello-world/)
```
