

h1

Description

null **h1**(string [\\$name](#), string [\\$route](#))

Sets the H1 for a page

Notice

This function requires setting the section name beforehand by using the [section\(\)](#) function.

Parameters

[\\$name](#)

H1 title

[\\$route](#)

URL route to the page.

Examples

```
<?php

route('/foo', function() {

    // Must set the section first
    section('Foo', '/foo');

    // Set the pages <h1></h1>
    h1('Bar', '/foo/bar');

    return view('index.html');
});
```
