

button

Description

null **button**(string *\$title*, string *\$route*)

Creates the an action button for your section. Usually used when you want a user to add an item.

Notice

This function requires setting the section name beforehand by using the [section\(\)](#) function.

Parameters

\$name

Title for your button.

\$route

URL route to the page.

Examples

```
<?php
route('/foo', function() {
    // Must set the section first
    section('Foo', '/foo');

    // Create an action menu
    button('Create', '/foo/bar');

    return view('index.html');
});
```
