

menu

Description

null **menu**(string *\$route*, array *\$menu*)

Creates a sub menu for your section.

Parameters

\$route

Route to your section.

\$menu

Any associative array of menus. Keys hold the menu title and the values hold the URL route.

Examples

```
<?php
route('/foo', function() {
    menu('/foo', [
        'Menu 1' => url('/foo/menu-1'),
        'Menu 2' => url('/foo/menu-2'),
        'Menu 3' => url('/foo/menu-3')
    ]);
    return view('index.html');
});
```
