

cache

Description

Core\Cache **cache()**

Store data in the systems cache.

Examples

```
// Set a cache using the key "foo" with the value "bar"  
cache()->set('foo', 'bar');  
  
// Get the value for "foo"  
echo cache()->get('foo');  
  
// Store an array in cache  
cache()->set('foo_array', [  
    'hello' => 'world'  
]);  
  
// Get an array from cache  
$array = cache()->get('foo_array');  
print_r($array); // Will output: Array ( [hello] => world )  
  
// Delete an entry from cache  
cache()->del('foo');
```

Methods

Method	Description	Usage	Returns
get(string \$key)	Get data from cache based on a key. \$key Unique cache key.	echo cache()->get('foo');	On success it returns the value, false if its not cached.
set(string \$key, mixed \$value)	Sets data cache data based on your key. \$key Unique storage key. \$value Value to set for this entry. Can be a string, array, int or boolean.	// Set a cache using the key "foo" with the value "bar" cache()->set('foo', 'bar'); // Store an array in cache cache()->set('foo_array', ['hello' => 'world']);	Returns the cached value on success, false on failure.
del(string \$key)	Deletes an entry from cache \$key Unique cache key.	cache()->del('foo');	null
purge()	Deletes all entries from cache.	cache()->purge();	null
