```
string _p(string $phrase [, array $replacements] )
```

Wrap your phrase or var\_name in the `_p()` function. The phrase/var\_name have to define at `phrase.json`

### How to define?

Please check here: [Translation](#) for more detail

## Parameters

### \$phrase

English phrase or Var name

### \$replacements

Pass an associative array to add dynamic phrases.

## Examples

### \_p example

```
/**  
 * Prints the phrase "Hello World!" and tries to find  
 * a translation in the database if it exists.  
 */  
echo _p('Hello World!');  
  
/**  
 * Pass an associative array to add dynamic phrases.  
 */  
echo _p('My name is {name}', ['name' => 'Bob']);
```
