

notify

Description

null **notify**(string **\$app_id**, string **\$key_name**, int **\$feed_id**, int **\$user_id**)

Push a notification to your user.

Parameters

\$app_id

Your apps ID.

\$key_name

Unique key to connect your notification to your [JSON Configuration](#).

\$feed_id

Feed ID#.

\$user_id

User ID# of whom we should send the notification to.

Examples

Sample code to be placed in your **start.php** when notifying the user.

```
notify('Sample_App', 'my_update', 1, 2);
```

The 2nd argument, must be a unique **\$key_name**, which should be associated in your **app.json** file

```
{
  "id": "Sample_App",
  "notifications": {
    "my_update": {
      "message": "Howdy!",
      "url": "/url/:id",
      "icon": "fa-video-camera"
    }
  }
}
```
