

phpFox 4.4

In phpFox v4.4.0, we have an improvement to remove all code, settings, database that aren't used anymore. This will make sure the source code is clean and avoid confusion for developers when they try to research/customize the phpFox core. This document is written to list all things we have removed from phpFox core since v4.4.0 and summarize all settings/user group settings used in phpFox.

Below are all of the things we removed from the phpFox core since version 4.4.0

Module	type	name
ad	ajax call	changeImage
announcement	ajax call	changeLanguage
attachment	setting	attachment_enable_mass_uploader
	user group setting	can_attach_on_bulletin
blog	controller	admincp.browse
	block	display-options
		menu
		share
		time
	template	entry-mobile
		timeline
	ajax call	deleteCategory
		addCategory
		displayCategories
		updateTitle
		updatePermaLink
		addUrl
		updateText
		inlineDelete
		getText
		viewMore
		addViaStatusUpdate
	setting	show_drafts_count
		total_pages_to_cache_blog
		blog_display_user_post_count
		blog_cache_minutes
		total_pages_to_cache_blog
		digg_integration
	user group setting	search_blogs
