

# phpFox 4.5.2

## User Group Settings

From version 4.5.2, below user group settings will be removed from the Core script:

Setting var name	Setting Title	App	Reason
feed. can_remove_feeds_from_ dashboard	Can remove feeds from their dashboard?	feed	The setting isn't useful anymore
feed. can_remove_feeds_from_ profile	Can remove feeds from their own profile?	feed	The setting isn't useful anymore
mail.mail_box_limit	This setting tells how many messages can be stored based on the user group. It is complemented by the setting override_mail_box_limit to allow administrators and staff members to store any number of messages.	mail	The setting isn't useful anymore
mail. override_mail_box_limit	This setting tells if members of this user group can overcome the limit imposed by the setting mail_box_limit.	mail	The setting isn't useful anymore
mail. override_restrict_message_to_friends	Members allowed to override the "restrict_message_to_friends" will be able to receive messages regardless if they are friends of the sender or not.	mail	The setting isn't useful anymore

## Settings

Below settings will be available from this version:

Setting var name	Setting Title	App	Description
core.addthis_pub_id	AddThis - Public ID	core	Support AddThis as a core feature (detail info will be updated soon)
core.addthis_share_button	AddThis - Inline Share Button	core	Support AddThis as a core feature (detail info will be updated soon)

## Hooks/Plugins

We also have some new hooks/plugins to support developers can make change on the core features:

Name	App	Description
photo.service_process_add__start	photo	Plugin called before starting process to add new photo
v.get_share_form__end	core-videos	Plugin called at the end of function to get the share video form
admincp.service_module_process_updateactivity	admincp	Plugin called before enabling/disabling an app

## Functions

For the purpose of fixing the bugs and supporting more features, we decide to make some changes in some core functions from 4.5.2:

Class	Function	Change
Phpfox_Pages_Pages	getMyLoginPages	Remove all params
Phpfox_Image_Library_Gd	rotate	add param <b>\$bInCdn</b>

## Others

### Support pricing with multiple currencies in Settings and User Group Settings

Get more detail information about how to use it at [here](#).

### Support custom privacy built-in function for twig template

From now, you can support custom privacy for your item when use twig template, example:

```
<!-- we used it for editing video privacy -->
{{ privacy_build('feed', feed.id) }}
```
