

Videos

Introduction:

People love watching a video, and video is one of the important factors to keep your users engage and stay more in your community. phpFox makes it easy to share video from Youtube, Vimeo, Dailymotion, Mp4, Facebook or upload videos directly from computers.

NOTES: If you want to enable user to upload videos directly from a computer/device without using a link (Vimeo, Youtube..), your server must be able to encode/transcode videos so that they can be uploaded properly. phpFox supports 2 solutions that you can use [Zencoder video encoding service](#), or you must have [FFMPEG](#) installed on your server.

Notice:

- This app is applied for Neutron Pro package only. Refer to <https://www.phpfox.com/> to see all packages.
- This app is currently compatible with phpFox 4.6.0 or later
- This app is available to install from the phpFox store. You can get it <https://store.phpfox.com/product/1819/video>.
- Uploaded videos will be converted only when phpFox cron job runs. Please check this [article](#) to setup cron properly.
