Import Data from v3

After installing the new app, you can import your data from v3 to our new version with 2 following ways:

First, go to AdminCP > Apps > Instant Messaging > Import Data From v3. In this view, you can see 2 ways to import.

Import data directly

> To use this function, PhpRedis extension is required, you can find the installation guide *https://github.com/phpredis/phpredis*.

Enter your redis info.

1. Click **Import**. Done.

Import data manual

Following the instruction:

1. Export data to json file by clicking **Export JSON** button.
2. Upload exported json file to your chat server (nodejs server, the same folder with file import.js).
3. Run the following command in command line:

```
node import.js
```
