

CDN Service

A content delivery network (CDN) is a system of distributed servers (network) that deliver content of websites to a user, based on the geographic locations of the user. This is one of the most popular solutions to deliver large scale websites to a global audience. It is effective in reducing latency, accelerating site load times. The closer the CDN server is to the user geographically, the faster the content will be delivered to the user. Hence, if you are seeking for CDN functionalities on phpFox, this app is for you.

Compatibility

- This app is currently compatible with phpFox 4.6.0 or later

Product Information

- Version: 4.6.0

Feature List

- Support CDN Service (PULL method) to load static files of the site.
- We already test with MaxCDN and KeyCDN.
