

Integrate your App with Addthis

From 4.5.3, you can add **Addthis** block to your pages with a simple way: use new template built-in function `addthis`:

```
{addthis}
```

Available parameters

Parameter	Description
pubid	Addthis tool's id
customize	Addthis tool's html
url	Custom URL of item
title	Custom title of item
description	Custom description of item
media	Custom media (image) of item

Note: `pubid` and `customize` are optional, configure them in case you want your app use your own Addthis style despite the configuration in AdminCP.

Example

Adding **Addthis** block with default configuration of core (You don't need to input `pubid` and `customize`)

```
{addthis url='http://example.com' title='Example' description='Description of example' media='http://example.com/image.jpg'}
```

Adding **Addthis** block with your own configuration (Input your `pubid` and `customize`)

```
{addthis pubid='your-pubid' customize='your-custom-html' url='http://example.com' title='Example' description='Description of example' media='http://example.com/image.jpg'}
```
