Compatibility

- phpFox 4.5.3 or higher

Product Information

- Version: 4.5.3

Feature List

1 . Sign up with Facebook account by following below steps:

- Go to the community landing page and click on the Facebook icon to sign up
- User has to authenticate the Facebook's account
- System saves the Facebook's email and generate a random password
- System get gender of user from Facebook to save to the database
- System download profile image of user from Facebook and save as avatar of user

2 . Sign in with Facebook's account

- At next time, user can login with Facebook account and he / she may need to authenticate the account again
- In case user sign up normally with email, ex: user@email.com, then next time, he / she sign in with Facebook's account whose email is also user @email.com, system will not get more user info from Facebook as gender or profile image

3 . Sign in normally with email

- User can use the Facebook's email to login into the community. The password is generated by the system when user sign up. Hence, the user should change password then.

4 . For those whose Facebook account is not verified by Facebook Team, while signing up via Facebook account, phpFox won't be able to get info from the email. In this case, user will need to input email manually
