

Creating a Theme

This will show you how to clone the default Bootstrap theme so you can make changes to it as any edits to the default Bootstrap theme will void your support and can cause site issues. We recommend purchasing custom themes from third party developers if you need something more than a basic theme or if you don't have HTML/CSS skills to change your theme how you want it.

Our video tutorial will have you select a Blank theme. Don't do that if you want to clone the Bootstrap theme and don't need to make many changes. For this tutorial, select Bootstrap as the theme to clone unless you have CSS changes. If you only need to change the logo and front banners, select Bootstrap. If you want to make HTML and CSS changes, select Blank.

- Click Themes

- Click Create New Theme

- You'll see a popup to enter your new theme's details.
 1. Choose Bootstrap or Blank to clone, depending on your needs.
 2. Enter a lower case alphabetical theme name.
 3. Submit when done.

A screenshot of a 'New Theme' form. At the top, it says 'New Theme' and has an 'IMPORT FILE' button with a close icon. Below is a 'Clone' section with a dropdown menu showing 'Bootstrap', with a purple circle containing the number '1' next to it. Below that is a 'Name' section with a text input field containing 'cooltheme', with a purple circle containing the number '2' next to it. At the bottom is a red 'Submit' button with a purple circle containing the number '3' next to it.

- Now, you will see the theme is added to your list of themes when in the [Theme Manager](#). You would want to click Edit when on your theme and set it as default:
 - Click the lower left arrow to open the theme options:

- Once the menu selection is open, select Set as Default Theme:

- Be sure to [clear your site's cache](#) after changing themes.
