

# Setting Up a Payment Gateway

In order to receive payments on your site (for subscriptions, ads, sponsor blocks, e-gifts, etc) it is necessary to set up a payment gateway for your site. By default, phpFox offers PayPal as a payment gateway.

This assumes you are already logged in as the Admin user and are [logged into the AdminCP](#).

- Click Settings >> Payment Gateways.

- Click on the drop-down option at the left of the gateway, and select "Edit Gateway Settings".
  - A popup form will come up to fill in as you want. This example shows Paypal.
1. Name of the Gateway as you want to display it.
  2. A description that your users will see.
  3. Active: Set to Yes to activate this or No to deactivate it.
  4. Test Mode: Set to Yes to test the gateway (by purchasing stuff in the front end to see how the payments are working). Set to No to have it a live gateway.
  5. PayPal Email: Where you want payments for things like subscriptions, ads, etc to go.
  6. Click Update to finish setting up.

## Editing: PayPal
