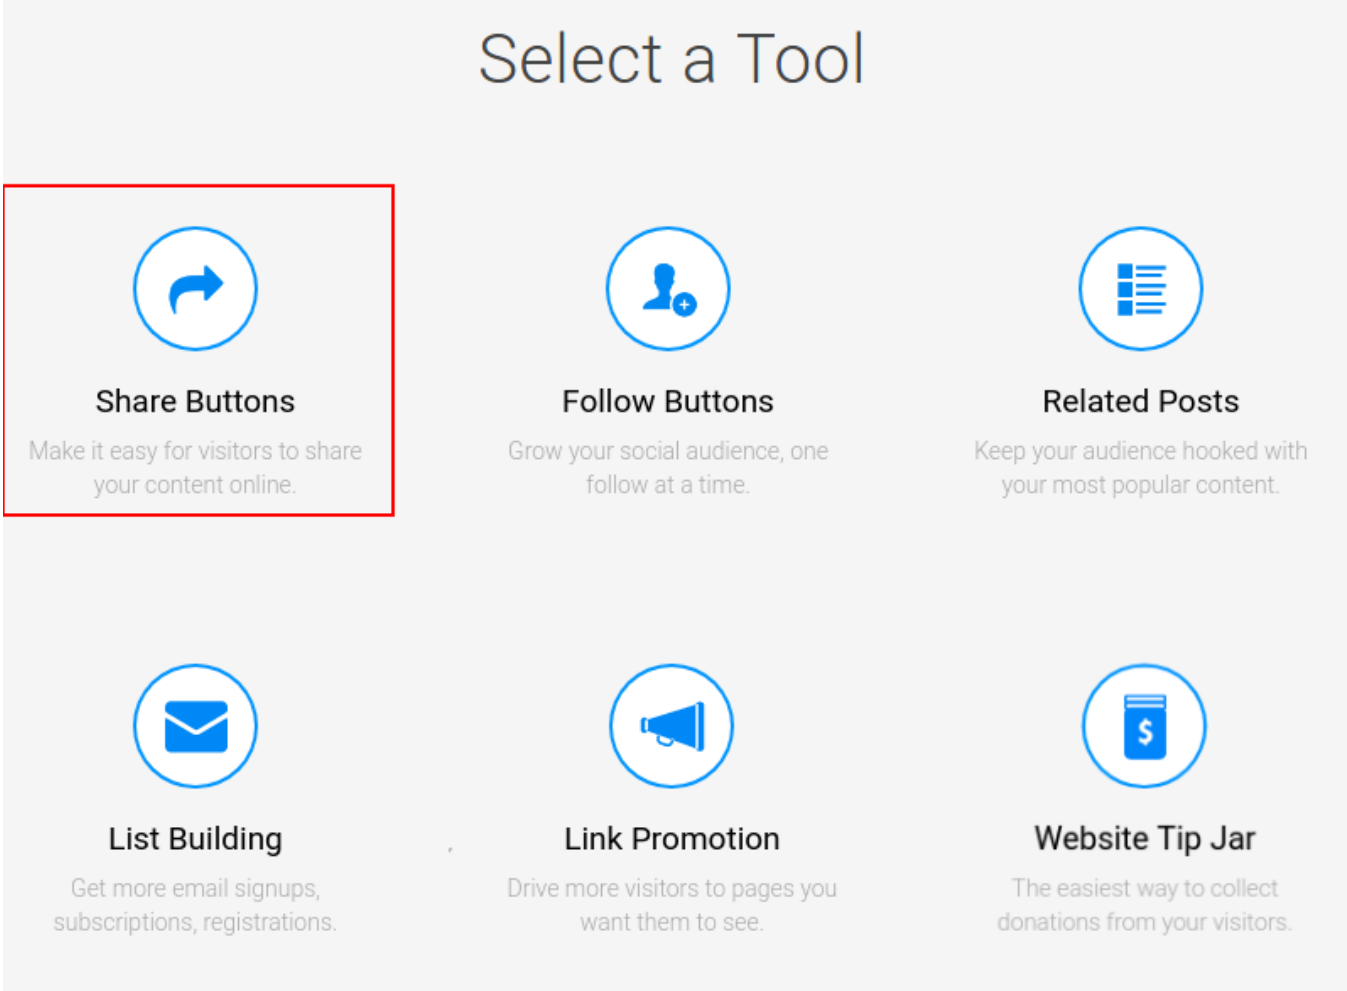
Addthis Integration

From phpFox version 4.5.2, we have supported integrating Addthis with phpFox. This doc will guide you how to get and configure Addthis on your site.

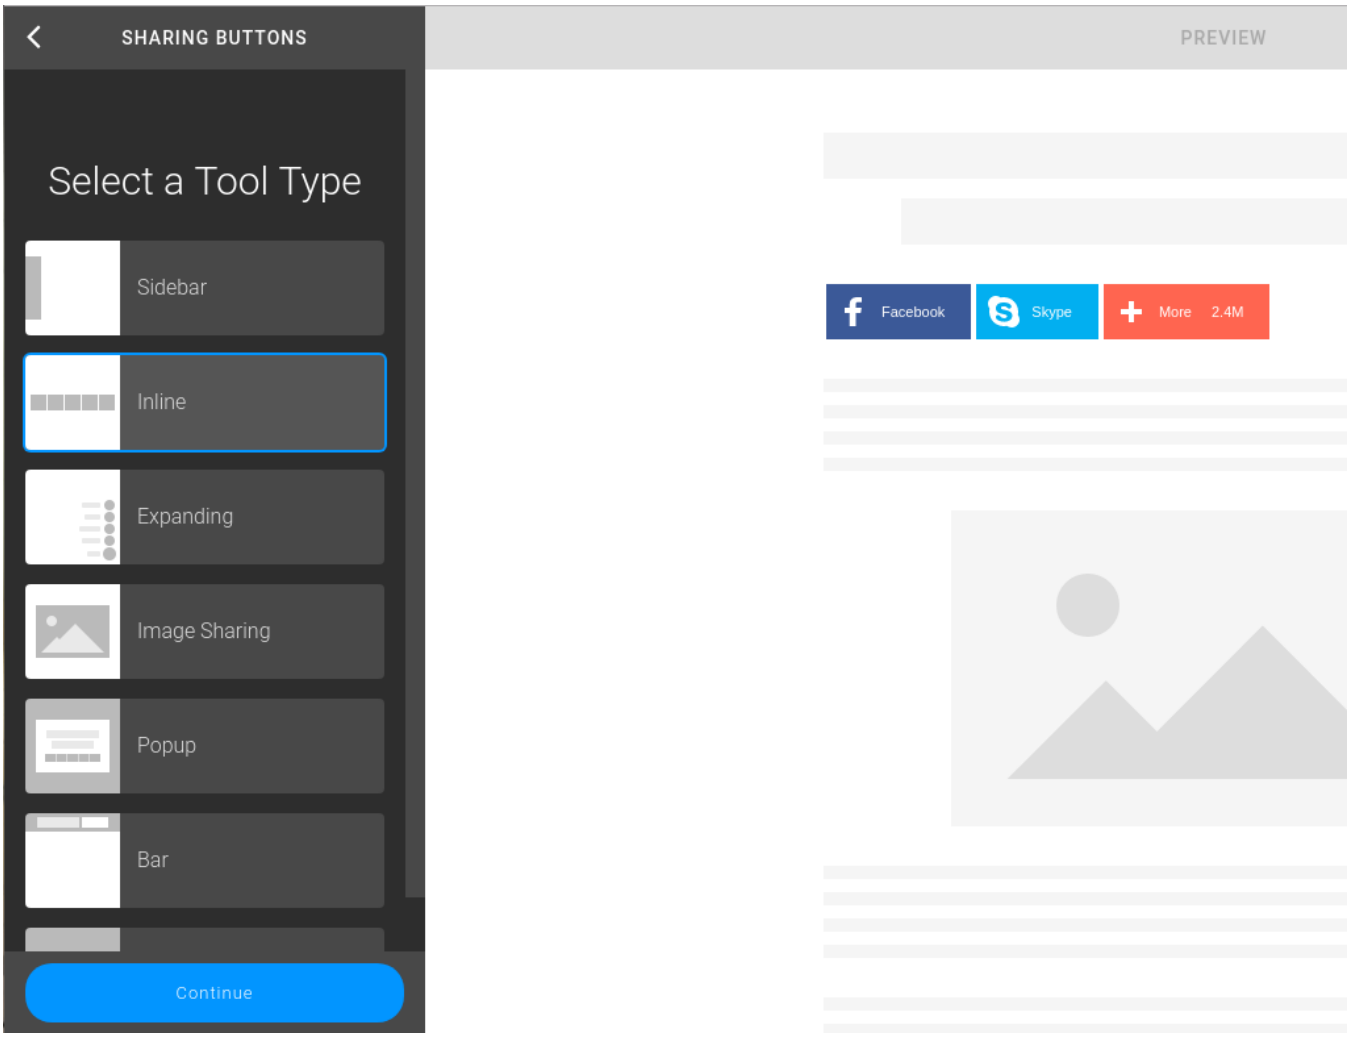
Get Addthis public id and custom html

Follow these steps to get the configuration:

- First, go to Addthis site, register an account and login to it.
- Go to menu **Tools**, click **Add new tool**, choose **Share Buttons** tool.

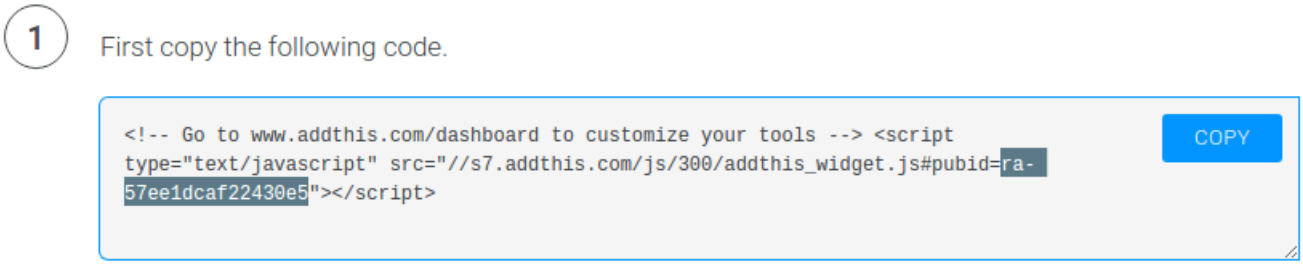


- Choose share button type **Inline** then you can customize your tool.

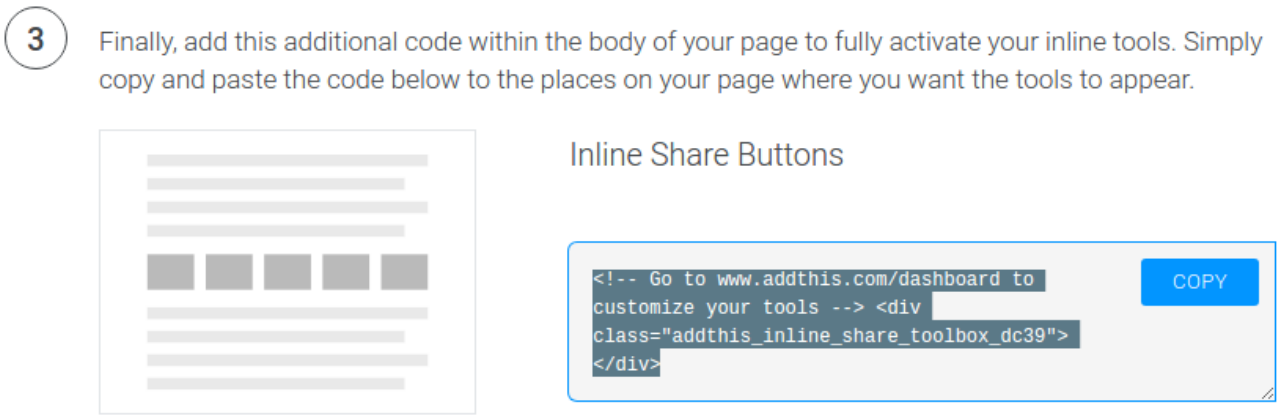


- After completing your customization, you can get your tool's id and html code as below.

Tool id:



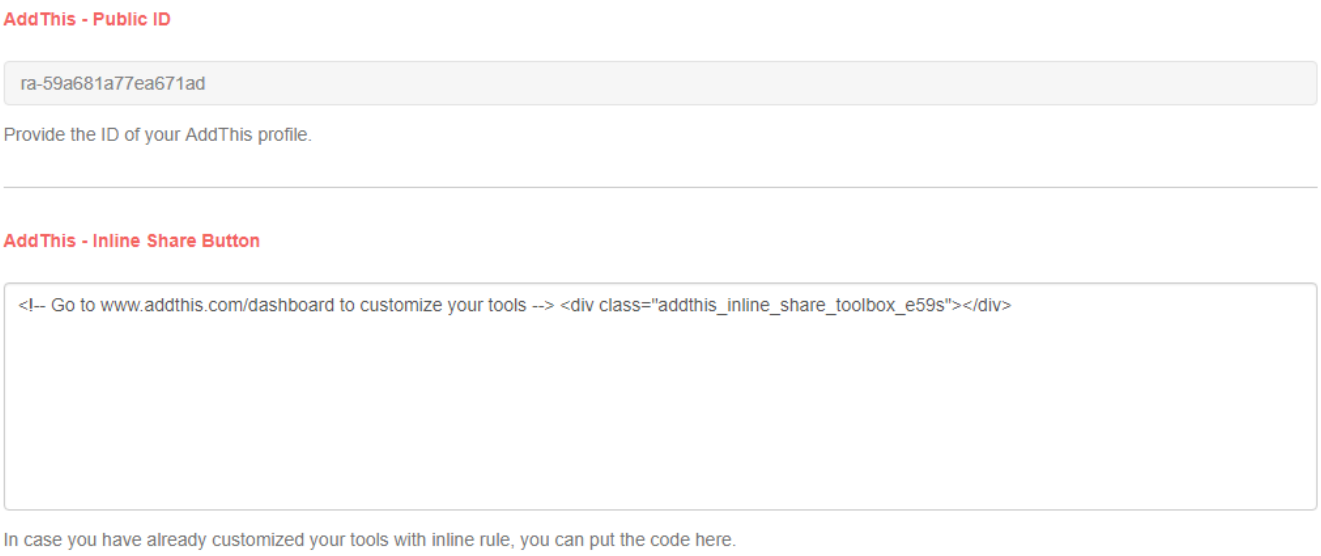
Html code:



After getting these values, the next step is entering the configurations to your phpFox site.

Configure Addthis in AdminCP

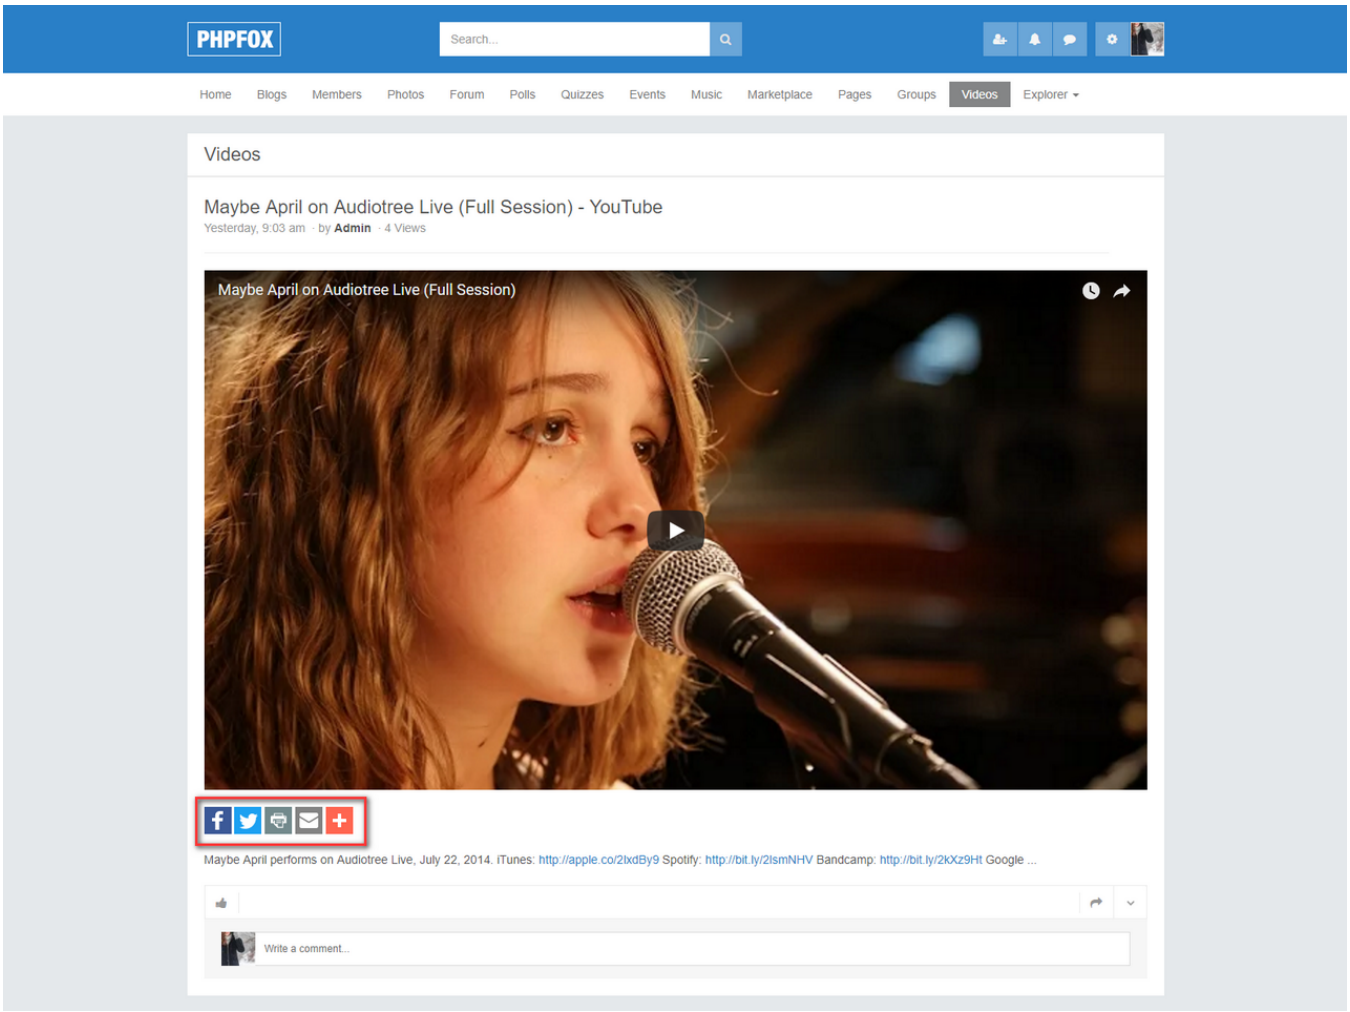
- Go to AdminCP, search the settings: **AddThis - Public ID**
- and **AddThis - Inline Share Button** and enter the configuration you have got in above step.



> Note: In case you don't enter those configuration, the site will use style inline for default

Congratulation! You have completed all steps for integrating Addthis with your site. Below are examples how it look like (on Core Videos app):

- Default style for **Addthis** block (admin haven't configured or customed yet)



- A custom style for **Addthis** block (admin has updated **AddThis - Public ID** and **AddThis - Inline Share Button** settings)
