

# phpFox 4.5.3 Build 2

## Bugs

| ID | Issue                                                                                        |
|----|----------------------------------------------------------------------------------------------|
| 1  | Page keeps loading endlessly when setting a theme as default on server using PHP version 5.5 |
| 2  | User Profile - Activity feed works incorrectly after loading more many times                 |
| 3  | Some issues in Install/Upgrade process                                                       |
| 4  | Cannot install/upgrade phpFox 4.5.3 in PHP version 5.5                                       |
| 5  | Cannot gift Points                                                                           |
| 6  | Duplicate FTP selection in Remove unused files page.                                         |

## Improvements

| ID | Feature                                                                         |
|----|---------------------------------------------------------------------------------|
| 1  | Support option to select/un-select all apps in Install/Upgrade platform process |
