Deprecated settings

Setting var name	Setting title	Reason	Remove Version
tag.can_add_tags_on_blogs	Can add tags on blogs?	The setting isn't useful anymore.	4.7.0

Porting Apps

A major target of phpFox version 4.6.0 is porting all core apps to standalone apps and publish them in the store. Besides, we have also defined some feature agreements to apply for all of them:

- Users can select actions of items on listing page same as on detail page.
 Count items on menu My Items.

- There is a popup to confirm when users delete an item.
- Support drag/drop, preview, progress bar when users upload files.
- Suggestion Block when the user views an item, the user can also see a block that displays or suggests other items based on the category of the current viewing item.
- Support collapse/expand categories in the frontend.
- Hide categories block, featured blocks, sponsored blocks, new items blocks on user profile listing item page.
- Support sponsor and feature for all app items.
- Display total views in listing pages.
- Support AddThis on item detail page.
- Hide all buttons/links if users don't have permission to do.
- Support hashtag in description fields of all items.
- Make clickable images for some default apps such as events, quizzes, polls, pages, etc.
- If deleting a category, admins will have an option to move items from one category to another.
- Support 3 styles for paginations.
- Admins can configure apps to integrate into pages/groups.
- Admins can control to show/hide items that belonged to pages/groups in items listing pages.
- Support SEO settings for all apps.
- Add statistic information (total items, pending items...) in Site Statistic blocks.
- Support 2 levels of categories.
- Allow admin can change default photos.
- Validate all settings, user group settings, and block settings.
- Allow admin to manage sub-categories directly from the Categories page.
- Show full list and active on the chosen item when browsing by category.

Furthermore, we also have improvements to each app. The detail information will be provided in the release note of each app.

Material Template.

One of the most impressive features we want to introduce to you in this new version of phpFox 4.6.0 is the new template **Material**. New design, new layout, and new features that only available on this template, such as:

- Statistic information (like count, comment count, share count) in feed items.
- Badges for featured, sponsored, pending items in detail page.
- New layout for all core apps.
- New layout for each device screens: Laptop, Tablet, Phone
- New layout for all core components: user profile popup, notification panels, messages panels, user profile cover, ...
