Add Item Statistic Info for Users

Since phpFox version 4.6.0, in `Browse Users` page (`Admincp`), admin can view item statistic information of users. So, we prepared this document for instructions to integrate your app with this feature.

- Add a callback function name `getUserStatsForAdmin`
- Example

```
/**
 * @param $iUserId user id of selected user
 * @return array|bool
 */
public function getUserStatsForAdmin($iUserId)
{
    if (!$iUserId) {
        return false;
    }

    $iIncomplete = db()->select('COUNT(*)')
        ->from(':todolist_task')
        ->where([
            'user_id' => (int)$iUserId,
            'task_status' => 0
        ])
        ->execute('getField');
    $iComplete = db()->select('COUNT(*)')
        ->from(':todolist_task')
        ->where([
            'user_id' => (int)$iUserId,
            'task_status' => 1
        ])
        ->execute('getField');
    return [
        'merge_result' => true,
        'result' => [
            [
                //Name of the item
                'total_name' => _p('incomplete_tasks'),
                //Total count
                'total_value' => $iIncomplete,
                'type' => 'item'
            ],
            [
                'total_name' => _p('complete_tasks'),
                'total_value' => $iComplete,
                'type' => 'item'
            ]
        ]
    ];
}
```

- Result

Statistics of Admin

Total Items	Activity Points
User Group	Administrator
Friends	11
SPAM Count	0
Comments	33
Photos	252
Quizzes	1
Incomplete Tasks	4
Complete Tasks	13
