

Assign permission access to your Subscription subscribers

phpFox supports an advanced User Group setting connected to the Subscription Module. It gives you as the site admin the ability to create subscription packages where you can restrict and grant user access permissions to a specific feature. This tutorial will show you how to create a custom user group where users can access special items while other user groups cannot do and you can charge for these special features. Before you can do this, make sure you have Subscription packages and link them to the user group. You may also want to take a look at our guide on creating a subscription and link it to a specific user group [here](#).

Let's assume that you already have subscription plans created and assigned them to a group of users. For the purpose of this tutorial, we created 2 groups of users including **Registered users** and **VIP members** which are respectively linked to **Standard** and **Premium** membership packages. How to create a user group, please refer to [this topic](#).

Go to **Admin CP > Members > User group setting**. Based on your ideas, choose a specific module/app that you want to set special permission then Enable/Disable features setting as you wish, finally hit **Save changes**.

User Group Settings » Registered User (ID#2) Create User Group

Apps Music **Groups** Registered User

User Group Settings

Can upload music?
Notice: This will allow this user group the right to upload songs to the public music section. NO

Can add comments on music albums? NO

Can add a comment on a song? NO

Can add new music album?
Notice: This will allow this user group the right to add music albums to the public music section. NO

Can edit all music albums? NO

Can edit own music albums? Save Changes

allow/ restrict what action this group of user can take in Music app

Each subscriber group can be assigned to specific role which determines what actions the user can take. The picture above as an example of Music module where you restrict **Registered user** from uploading music to your website.

...while **Vip members** have full access and permission to this module.

When you've created your different membership levels and assigned special permission to each level. Then you can make a **Membership Comparison Page** to show your members the differences between membership packages. Here are the steps:

From **Admin CP> Members> Subscription> Comparison> Add new feature**. Clicking on **Add new feature** will come a pop up that allows you to add compare feature name and decide which membership package is this feature supported.

Subscription Packages

Add Compare Feature

***Feature Name in English (US)**

Feature Name in other languages

Max 100 characters.

In which package is this feature supported ?
