

Control Version of Your Theme

If you want the site admin can receive an alert when your theme has new upgrade version, please follow below steps:

Add Store Id and Version to Your App Package

When you post a product on phpFox Store, you can get the store id via its detail link, below is the example:

- Detail link of phpFox Material template:

```
https://store.phpfox.com/product/2004/material-template
```

-> Store id: **2004**

After getting the store id of your theme, add it to file `theme.json` of your package:

```
{
  "id": "material",
  "name": "Material",
  "store_id": "2004", //store id
  "version": "4.6.0", //curent version
  ...
}
```

Don't forget to add the version information in your theme configuration file.

Add/Update Version of Your Theme on phpFox Store

When you publish an theme or upgrade it, please make sure that the version information has been added or updated.
