## **Control Version of Your Theme**

If you want the site admin can receive an alert when your theme has new upgrade version, please follow below steps:

## Add Store Id and Version to Your App Package

When you post a product on phpFox Store, you can get the store id via its detail link, below is the example:

• Detail link of phpFox Material template:

https://store.phpfox.com/product/2004/material-template

## -> Store id: 2004

After getting the store id of your theme, add it to file theme.json of your package:

```
{
    "id": "material",
    "name": "Material",
    "store_id": "2004", //store id
    "version": "4.6.0", //curent version
...
}
```

Don't forget to add the version information in your theme configuration file.

## Add/Update Version of Your Theme on phpFox Store

When you publish an theme or upgrade it, please make sure that the version information has been added or updated.

Material Template	
View Product	General Settings
Test Install	PRODUCT NAME
STATS	Material Template
Views 339	Keep it short and sweet.
Installs 23	VERSION
PRODUCT	4.6.0
Files	Version of your product.
SETTINGS	CORE MIN VERSION
General	4.6.0
lcon	Min Version of phpFox core that required for your product.

And now, if we want to release an upgrade version for our Material template, we will update the package and the version info on the store. Then, all admin of sites that using Material template will received a alert message such as below:

A new version 4.6.1 of theme "Material" has been available on store.

If the site admin click on Continue button, the Material template on their site will be upgraded to version 4.6.1.
