Bundle Your JS Files

> Requires: *phpFox version >= **4.6.0***

As you have known, from version 4.6.0, we have let developers control that their Javascript files can be bundled or not when [Bundle JavaScript & CSS](#) feature is enabled on the phpFox site. So, purpose of this tutorial is providing the guideline in case you want apply this feature to your files.

- **First**, you need to add a plugin/hook name `bundle__start` in your apps/themes.
- **Then**, add the list of files that will be bundled with Core files.

```
$aBundleScripts[] = [
    '{file_path}' => '{product_type}_{product_dir_name}',
];
```

> *{file_path}*: the relative path of file with `assets` directory.
> *{product_type}*: type of your product. `app` or `flavors` (App or Theme)
> *{product_dir_name}*: name of your product directory.

Below is example of **Core Blogs** app:

```
$aBundleScripts[] = [
    'autoload.js' => 'app_core-blogs',
];
```
