

Add Custom Menu to User Profile Page

If you want to add a custom menu on user profile page same as the core apps. Please follow below instructions:

*Note: We will use the code of **To Do List** app as an example for this tutorial.*

Add two callback functions in **Callback.php** same as below:

```
/**
 * Return string to generate url
 * @return string
 */
public function getProfileLink()
{
    return 'profile.todo'; //the link when users click on the custom menu
}

/**
 * Set menu in profile
 * @param array $aUser
 * @return array|bool
 */
public function getProfileMenu($aUser)
{
    $iTasksCnt = Phpfox::getService('todo')->get(['user_id' => $aUser['user_id']], true);

    if (!Phpfox::getParam('profile.show_empty_tabs') && !$iTasksCnt) {
        return false;
    }

    $aMenus[] = [
        'phrase' => _p('to_do_list'), //phrase the custom menu
        'url' => 'profile.todo', //the link when users click on the custom menu
        'total' => $iTasksCnt, //counter shown on the menu
    ];

    return $aMenus;
}
```
