

# How to enable/disable a module

## Archives

You are using phpFox version earlier than 4.6.0? Please refer instruction for this article [here](#).

There may be some phpFox default modules that you don't need for your site. This tutorial shows how to disable and enable the default phpFox modules.

NOTE: This is only for versions phpFox 4.5 and above.

- In your AdminCP, Go to Apps >> installed and then select the app you want to activate/deactivate.

## Manage Apps

Actions ▾

Search for app names...

Name	Version	Latest	Author	active	Settings
 PF	4.5.2		<a href="#">phpFox</a>	<input type="checkbox"/> OFF	
 Ads	Core	Core	<a href="#">phpFox</a>	<input type="checkbox"/> OFF	
 Amazon CDN	4.5.4	4.5.4	<a href="#">phpFox</a>	<input checked="" type="checkbox"/> ON	
 Announcement	4.6.0	4.6.0	<a href="#">phpFox</a>	<input checked="" type="checkbox"/> ON <span>Deactivate</span>	
 Attachment	Core	Core	<a href="#">phpFox</a>	<input checked="" type="checkbox"/> ON	

- Clear [cache](#) when done.
