

How to Enable/Disable Apps?

 This tutorial is only applicable for phpFox using version 4.6.1 or later

Login to your AdminCP. Go to Apps >> Installed >> Select the app you want to Enable/Disable using the toggle button.

The screenshot shows the phpFox AdminCP interface. The left sidebar contains navigation links: Dashboard, Apps (selected), Installed, Purchase History, Find More, Globalization, Appearance, Members, Settings, Maintenance, and Logout. The main content area is titled 'Manage Apps' and includes a search bar for app names. Below the search bar is a table listing installed apps. A red arrow points to the 'active' toggle switch for the 'Ad' app, which is currently turned on.

Name	Version	Latest	Author	active	Settings
