

Call Hook When Users Cancelled Their Accounts

We prepared this document for instructions to setup for a hook call when users cancelled their accounts.

- Add new callback function to file "Callback.php".
- Example

```
/**
 * Action to take when user cancelled their account
 *
 * @param int $iUser
 */
public function onDeleteUser($iUser)
{
    // delete todo tasks
    $aTodoTasks = $this->database()
        ->select('album_id')
        ->from(Phpfox::getT('todolist_task'))
        ->where('user_id = ' . (int)$iUser)
        ->execute('getSlaveRows');
    foreach ($aTodoTasks as $aTodoTask) {
        \Phpfox::getService('todo.process')->delete($aTodoTask['task_id']);
    }
}
```
