Porting Apps

Activity Point

With Activity Point app, users can easily and smoothly manage settings and configurations of pointing system on both backend and frontend. As a stand-alone app, there will be no boundary or limit from the Core system. Additionally, Activity Point app opens a door for developers to take advantage on pointing system and use it in developing, modifying and adjusting features on their apps.

Message

Packed with a brand new design and various newly developed features, we understand your need for a modern and full-featured messaging app on phpFox. Therefore, in this ported app version, we conclusively work on not only perfecting current features but also developing new features

Skins on templates

Template Skin, the pre-defined color sets for your template. Upon selecting, the color styles of template skin will be automatically applied without the need of adjusting each and every theme component manually.
