Core API

POST /core/temp-file

This API is to upload a file and temporarily save it on server for the next action.

Example URI

```
http://example.com/restful_api/core/temp-file/?type=blog
```

Parameters

Parameter	Type	Required ?	Description
type	String	Yes	App alias/Module id - **This is query string**
id	Integer	No	Item id (etc: blog id) - **This is request body**
file	File	Yes	File need to upload - **This is request body and default name for upload file. Each app/module maybe define param_name in getUploadParams callback, so you need to follow this to make sure the upload file name is right**

Response

```
{
      "status": "success",
      "data": {
                "file" : 776,
                "type" : "blog",
                "field_name" : "temp_file"
      },
      "message": "",
      "error": null
}
```
