

Enable Registration with Google

In this article, we will introduce about how to enable registration with Google account.

In order to allow users to **Sign Up/Login** with **Google**, first of all, you need to setup **"Google OAuth ID"**. You can follow the below link to know how to get an **OAuth ID**.

<https://developers.google.com/identity/sign-in/web/sign-in>

After getting the **OAuth ID**, please go to **adminCP>Settings>Registration Settings>Google OAuth ID>Fill in the ID and Save Changes**.

The screenshot shows the adminCP interface. On the left is a sidebar with a menu including Dashboard, Apps, Globalization, Appearance, Members, Settings (highlighted), Maintenance, and Logout. The main content area is titled 'Search settings...' and contains several settings sections. The 'Google OAuth ID' section is highlighted with a red box. It has a text input field and a description: 'This setting is required for login with Google feature. More information on how to get an OAuth ID can be found [here](#).' A red arrow points to the input field with the text 'Fill in the ID here'. Other settings visible include 'Registered User' (dropdown), 'SMS Service' (dropdown set to Nexmo), 'Nexmo API KEY' (text input), and 'Nexmo API Secret' (text input).

Then, from **Registration Settings** page, continue finding the setting **"Enable Registration with Google"** and toggle it on>**Save Changes** to finish.

The screenshot shows the 'Registration Settings' page in the adminCP. The sidebar is the same as the previous screenshot. The main content area shows settings for registration. The 'Enable Registration with Google' section is highlighted with a red box. It has a toggle switch that is turned on (YES) and a description: 'Enable this setting will allow users to Sign Up/Login with Google. It only work if setting "Google OAuth ID" is set.' Below this is the 'User Group on Registration' section with a dropdown set to 'Registered User' and a description: 'With this setting you can control the default user group for a user when they register. This setting will be override if user choose a membership package.' The 'SMS Service' section is also visible with a dropdown set to 'Nexmo'. At the bottom, there is a 'Google OAuth ID' section with a text input field and a 'Save Changes' button.

Tips: Always clear cache after making any changes.

The option **Sign Up with Google** will be displayed in the visitor landing page if **Google OAuth ID** is correctly.
