

Enable Registration with phone number

Registration & login with mobile phone number extension simplifies your user's registration. This eliminates the need for email, thereby allowing the user sign up with their phone number. This tutorial will show you how to enable registration with phone number for your site.

Notice

This feature is currently compatible with phpFox version 4.8.2 afterward.

1. Turn on this feature in AdminCP:

- Go to Admin CP > Settings > Registration Settings> Turn on the setting [Enable Registration using Phone Number

The screenshot shows the AdminCP interface with a sidebar on the left containing various settings categories. The 'Registration Settings' category is selected. The main content area displays several settings with toggle switches:

- Force Users to Reenter Email**: Enabled (YES)
- Spam Check Requires All Questions**: Enabled (YES)
- Enable Registration using Phone Number**: Enabled (YES) - This setting is highlighted with a red box.
- Enable Registration using SMS Service**: Disabled (NO)
- Enable Registration with Google**: Disabled (NO)

2. Register SMS service

- Now you are required to register an account for SMS service from an SMS provider to get the AIP key. Currently, phpFox supports the below 3 providers, you can choose a provider of your choice:

Nexmo: <https://www.vonage.com/communications-apis/sms/pricing/>

Twilio: <https://www.twilio.com/sms/pricing/us>

Clickatell: <https://www.clickatell.com/pricing-and-coverage/message-pricing/#step-1>

3. Configure SMS service

Once you're done with the SMS registration, go back to Admin CP > Settings > Registration Settings > Choose the SMS service provider that you just registered > Input your AIP Key and all related information. We took Nexmo service as an example in the below picture. Don't forget to save changes once you're done.

The screenshot shows the 'Settings' page in a dashboard. The left sidebar contains a menu with 'Settings' highlighted. The main content area is titled 'SMS Service' and features a dropdown menu with 'Nexmo' selected. Below this, there are sections for 'Google OAuth ID' (with a text input field and a note), 'Nexmo API KEY' (with a text input field), 'Nexmo API Secret' (with a text input field), and 'Nexmo Phone Number' (with a text input field). At the bottom, there is a 'Twilio Account ID' field and a 'Save Changes' button.

Still on the Registration Settings page, you can also turn on the setting "Enable Registration using SMS Service". Enable this setting to allow users to receive verification code via SMS.

The screenshot shows the 'Registration Settings' page. The left sidebar contains a menu with 'Settings' highlighted. The main content area has several toggle switches: 'Enable Registration using Phone Number' (set to NO), 'Enable Registration using SMS Service' (set to NO and highlighted with a red box), and 'Enable Registration with Google' (set to NO). Below these, there is a section for 'SMS Service' with a dropdown menu showing 'Nexmo'.

Once the configuration is completed, the signup page from the user front-end will look like this:
