

How to create custom blocks on Home page

Since phpFox 4.7.1, the Home page of the Material template can be configured with custom blocks easily. Let's take a look some samples of the Home page of the Material template

Landing page with 2-column layout

Landing page with 3-column layout

1. Example on Block Area 1 or Block Area 3

You can put some custom blocks such as the site-related statistic, sponsored content or featured members, etc. in these block areas. In this example, we opt to **Featured Members** block, so visitors can see who are active on your community as the image above.

- Go to **AdminCP >> Appearance >> Blocks >>** Choose **Visitor Landing Page (core.index-visitor) >> Add Block**. Setup the new block as follow.

1673	Product Announcement	Core	ON	
4327	phpfox 4.7.1	Core	ON	

Block 2

ID	Title	Apps	Active	Settings
1704	Welcome	User	ON	
11	User SignUp for Guests	User	ON	
3433	Import Your Contacts	Contactimporter	ON	

Block 1

ID	Title	Apps	Active	Settings
12	Featured Users for Guests	User	ON	
1697	PHP Code	Core	OFF	

2. Example of Block Area 2

The block area 2 should be used for the main content of the Landing page since it will get more focus on visitors. By default, you can use **Welcome** and **User Sign up for Guests** in this block area. The **Welcome** block can show the main photos, and **User Sign up for Guests** block is to display the Registration form.

- In 1-column or 2-column layout, these blocks will be displayed in a horizontal way, photo displays next to the Registration form.
- In the 3-column layout, block area 2 displays 2 these blocks into vertical way, one on top another.
