

# Configure Site info

This article will show you the way to configure your site info such as site title, site copy's right, meta keyword..etc.

From your **Admin dashboard**, select **Site Settings** under the **Setting** tab from the left menu

The screenshot shows the MetaFox Admin dashboard. On the left is a dark sidebar menu with various settings options. The 'Site Settings' option is highlighted with a red rectangle. The main content area is titled 'Dashboard » Core » Site Settings'. It contains several form fields for configuring site information:

- Name Of Site:** A text input field containing 'Social Network'.
- Name of your site:** A label above the Site Title field.
- Site Title:** A text input field containing 'Social Network Community'.
- This will displayed on each page as the title of your site.** A descriptive text below the Site Title field.
- Week Starts On:** A dropdown menu set to 'Monday'.
- Copyright \*:** A text input field containing 'Social Network ©'.
- Add your site's copyright.** A descriptive text below the Copyright field.
- Site Title Delimiter \*:** A text input field containing a period '.'.
- This value will be used as the delimiter to separate titles being added for each page on the site.** A descriptive text below the Site Title Delimiter field.
- Meta Keywords \*:** A text input field containing 'Social Network Community'.

Here, add the following information about your MetaFox site:

- Website title
- Site Name
- Copyright
- Meta Keyword
- Meta Description
- Other site info fields.

Don't forget to hit the **Save Changes** button to save your changes.
