

ChatPlus solution

ChatPlus is the communication solution on phpFox sites with Advanced Messaging functionalities, fun reactions, voice messages, video calls and more. ChatPlus solution is supported on both web version and mobile apps. It brings more fun for users to interact together.

The one-time price of this solution (\$999) is for ChatPlus software and setup only. It doesn't include a monthly fee of infrastructure (server, service) to support this feature.

ChatPlus solution includes 2 parts:

- ChatPlus app is installed on your phpFox site. It provides front-end functionalities of Chatplus on the web version, APIs for mobile apps and communicates with Chatplus server. This app can be installed and upgraded within AdminCP as other apps on phpFox Store.
- ChatPlus server is to process and store all chat/ discussions. It is necessary to note that video call processing is always an intensive-CPU task. To avoid a significant impact on performance on web and mobile apps when having too many video calls, the ChatPlus server should be installed on the different server on which the phpFox site is installed on. You can refer to the [ChatPlus setup guide](#).

Main Features List

1. Advanced Instant Messaging features:
 - a. Support Private Chat (between 2 users) or Group Chat (with many users). In the case of Group chat, users can join private groups (which require invitations) or public groups.
 - b. Sharing Photos, Videos, GIFs, Files, Emojis and Stickers on chat/discussion
